

To whom it may concern,

As Jiongyan's undergraduate thesis tutor and his teacher of "GIS Principles" and "Spatial Analysis", I think Jiongyan is an intelligent, diligent and enthusiastic student. Therefore, I am delighted to write this recommendation letter for him.

During the courses, Jiongyan was able to complete all his assignments with high quality. He got 90+ grades in both courses, which proves his incredible talent in Geographic Information Science.

Outside of the class, Jiongyan was always willing to spend time on some research projects. For example, he took part in the project "Dynamic analysis of the global aviation network during COVID-19 period" and "Development of the barrier-free travel application". Both projects demonstrate not only the advanced data analysis technique he masters but also his capability of utilizing complex CS-related knowledge as well.

Jiongyan is also keen on computer science. In addition to a large number of computer courses provided by our college, he has also learned a lot of extracurricular CS knowledge. Additional to mastering the use of a variety of programming languages, he also involves in the field of machine learning and high-performance computing. It is commendable that he can apply the knowledge he has learned to the project practice, providing brilliant ideas for our team.

When Jiongyan told me that he was determinant to continue his study in Master programs, I felt glad to make the recommendation. I am convinced that he will make his own contribution not only in the GIS discipline, but also some related fields, such as Data Science, Computer Science or Human Geography. His GIS foundation will support him to devote himself in various domains. I firmly believe that no matter which major he studies at your university, he will become a very excellent student and have a bright future in his field.
